App Descriptions

OpenGround Cloud is a secure enterprise cloud collaboration platform for geotechnical data management, to empower teams with access to current and historical project data in a dynamic cloud-based environment. OpenGround Cloud offers a complete solution for planning, data entry, borehole log production, lab data management, reporting, visualization and more. Improve collaboration for better, data-informed decisions among all contributors to a project and significantly increase the value of your geotechnical data. Role-focused enablements provide flexibility to customize subscriptions to meet your requirements. The various levels of enablements include the following applications.

	Data Collector	A mobile application for field-based geotechnical data collection with OpenGround Cloud connectivity.
	Web Portal	A website that your clients, engineers, or data suppliers can use to upload and view borehole data.
	Professional	A desktop app that provides a comprehensive data management and borehole logging solution for geotechnical and geoenvironmental site investigations.
	App Connector	A link that allows your own, or third-party applications to log into your OpenGround Cloud account using the OpenGround Cloud API.
	Admin Portal	A website that allows administrators to update configuration items for their OpenGround Cloud system.
	Template Studio	A desktop app that enables your administration team to design template outputs for your logs, sections, and site plans.
	Excel Extension	A desktop app that works inside Microsoft Excel and enables dynamic querying and viewing of your OpenGround Cloud data directly in Microsoft Excel.
	Civil 3D Extension	A desktop app that works inside Autodesk Civil 3D that enables dynamic querying and viewing of your OpenGround Cloud data directly in Autodesk Civil 3D.
	Data Entry	A desktop app that provides an efficient and simplified user experience for users who just need to add and edit borehole data.
	Launcher	A desktop app that ensures your installed OpenGround Cloud desktop apps are up to date. If they are not up to date, Launcher will update them for you.

Levels of Enablement

Collector

For use for field-based data capture

Included Apps:

Data Collector

Collaborator

For use by data providers and clients

Included Apps:

Web Portal

Contributor

For use by data entry staff

Included Apps:

Data Entry

App Connector

Launcher

Integrator

For use by design staff integrating data into CAD/BIM

Included Apps:

Civil 3D Extension

App Connector

Launcher

Manager

For use by staff responsible for managing, reporting, and analyzing data

Included Apps:

Professional

Excel Extension

Template Studio

Admin Portal

App Connector

Launcher
